FORTRON INJECTOR MAX, FUEL INJECTOR CLEANING TREATMENT

Another specialist service brought to you by TyreMarks, FORTRON Diesel and Petrol Injector Cleaning.

Anyone that has had the misfortune of having an Injector fault in recent years will understand the importance of a machine like this. Injector faults are more than common in modern day vehicles, they are also a very expensive item to replace, often £200+ per injector, so a quick and easy option is to have a specific injector clean without having to remove the injectors from your vehicle which will save you Money.

With any engine whether it's in a car, van or anything else, fuel injectors suffer from heat soak when the engine is turned off. The continued Engine heat causes fuel to evaporate at the injectors, resulting in a gum, varnish and tar deposits accumulating around and on the fuel injector nozzles. Also over the years poor quality fuel, short journeys or high mileage's carbon deposits do build up in the fuel system which causes fuel injector blockages.

The FORTRON machine is a direct replacement for your vehicles fuel and fuel tank for the 30+ minutes your vehicle is undergoing the FORTRON treatment. We run our machine to the correct manufacturers fuel pressure for your vehicle, we then run your vehicle off our machine, running it on our special FORTRON cleaning chemical process, which as the engine runs pre-combustion it cleans the fuel system.

Pre-Combustion:
 Cleans through...
 Fuel lines
 Fuel rail and pressure sensor
 Injector internals & tips

Post-Combustion:
 Exhaust system
 Turbocharger
 Lambda sensors
 Catalytic convertor
 DPF (removing carbon deposits and restoring lost power)
