HydroFlow

ENGINE CARBON CLEANING TREATMENT

"You clean the outside of your vehicle, now we clean the inside of your engine!"

Carbon build up over the course of a vehicle's lifetime can cause a wide array of vehicle problems and in many cases these issues can be the difference between an MOT pass and a fail. The Hydroflow machine is revolutionary, giving outstanding and unrivalled results, and unlike most other cleaners and treatments this machine is totally chemical free.

TYPICAL BENEFITS

The Hydroflow Machine offers to improve any engine whether it be a car, van, lorry or tractor; there really is no other way of cleaning engine internals this effectively and efficiently. The machine runs off ONLY de-ionized water and electricity to produce HHO (Hydrogen and Oxygen) gas in its purest form which is fed through the air intake system cleaning everything 'post burn'; injector tips, piston tops, EGR valves, intake manifold, swirl flaps, inlet and exhaust ports, turbo charger and variable veins, catalytic converter, DPF sensors and filters.

"Speak to anyone who has had this treatment done to find out just what a difference it makes, or just check out the reviews on the Internet, it will give your vehicle a fresh lease of life."

HydroFlow

Helps Improve:

- Engine Management Faults
- Smokey Exhausts
- Lumpy Idle / Flat Spots
- Reduced Throttle Response
- Increased Emissions
- Reduced MPG
- EGR Valve Faults
- DPF Issues
- Sticky Swirl Flaps
